About

For any issue related to BCL,
please address your email to:
BeijingCityLab(at)gmail(dot)com

The Beijing City Lab (BCL) is a research network, dedicated to studying, but not limited to, China's capital Beijing. The Lab focuses on employing interdisciplinary methods to quantify urban dynamics, generating new insights for urban planning and governance, and ultimately producing the science of cities required for sustainable urban development. The lab's current mix of planners, architects, geographers, economists, and policy analysts lends unique research strength.

The Beijing City Lab (BCL) is a research network, dedicated to studying, but not limited to, China's capital Beijing. The Lab focuses on employing interdisciplinary methods to quantify urban dynamics, generating new insights for urban planning and governance, and ultimately producing the science of cities required for sustainable urban development. The lab's current mix of planners, architects, geographers, economists, and policy analysts lends unique research strength.

We geocoded and digitalized the famous Beijing Map in 1750 乾隆北京图. Our interactive map exhibits the lot details of the original map, which also includes buildings information. For more information for the original map, click [HERE](#).

背景是现代的北京城，由于底图是火星坐标，经纬度配准的乾隆北京图稍有位置偏差，日后换成OSM底图有望解决这一问题。

- **Organizing framework**

- Executive directors (× 8)
- Honorary directors (× 14)
- Research fellows (× 26)
- Junior/student members (× 43)
- Followers from social medias (10,000+)

- **Our profile**

- A research network for quantitative urban studies
- Open platform for sharing working papers, research data, slides and city rankings
- Visualization for the public (received dozens of media coverage)
- Based at Beijing and perspective on the whole China

Research fellows

*Roles: to contribute research working papers, publications,
and data (volunteer work).*

All research fellow list

Junior/student members

*Roles: Involve in academic collaboration with BCL research
fellows.*

**Junior researchers and graduate students are warmly
welcomed to join BCL by sending your CV to Dr Ying
Long (BeijingCityLab(at)gmail(dot)com)**

Note that this is a non-paid work, not recruiting staffs of
Beijing Institute of City Planning, and has no relationship
with any affiliation of research fellows. Your join is expected
to conduct quantitative urban studies for Beijing with the
BCL research fellows.

All junior/student members list

Contributors

*Contributors are those who generously contributed
data or working papers to BCL.*

All contributors list

73 working papers

Researchers are invited to use our working paper series to disseminate their research about Beijing. Please email Dr. Xingjian Liu (xliu6@hku.hk) (1) your paper as a single file; and (2) a message indicating the journal to which the working paper has been submitted (this information will not be posted until the paper gets accepted). Please use the following file as your first page in the working paper.

66 Evaluating Liang-Chen scenario using counterfactual analysis

LONG Ying, ZHOU Yin

The Liang-Chen scenario for Beijing Urban Planning, though failed to put into practice, is an important milestone in the history of urban planning in China. However, planners hold different views on this scenario: Some think that, if the scenario had been adopted, the development pattern of single center would not appear; while some others point out that this scenario is just another form of single-center-spreading. These arguments are derived from perceptual knowledge, but not rational analysis. Based on constrained cellular automatic and the theory of

Ranking navigation: [Latest](#)

10 Road intersection density in China

LONG Ying, 2014

Road intersection density of each prefectural or above city in China defined as the ratio between the road intersection count within the urban built-up area of a city and the urban built-up area in square kilometer of the city. Road intersections are derived from the BCL data "21 Road junction density of China in 2011", and the urban built-up area of each city is interpreted from remote sensing images (2010).

31 data released

This channel would release Beijing, or the whole China, micro-data and maps (e.g. road networks, parcels, human mobility, historical city maps) for the BCL research fellows and external researchers. There are three levels of data access, free download, email request, and shared among research fellows / student members.

Our released datasets are stored in DropBox. We would like to recommend you setup DropBox for downloading the datasets to your account. This is helpful when the download is temporally unavailable due to too many requests.

城市模型学术报告会暨2014年北京城市实验室年会在清华大学举办

清华新闻网6月12日电（通讯员 袁晓辉）6月11日，“城市模型学术报告会暨2014年北京城市实验室年会”在清华大学建筑学院举办。

图为报告会现场。

本次报告会由清华大学人居环境实验室（TSHSI Lab）和北京城市实验室（Beijing City Lab, BCL）共同组织，来自中国科学院、清华大学、北京大学、北京交通大学、北京建筑大学、北京联合大学、北京航空航天大学、首都经贸大学、北京测绘设计研究院、清华同衡城市规划设计研究院、北京城市规划设计研究院、中国城市规划设计研究院、武汉大学、河海大学、中山大学、美国爱荷华州立大学、美国北卡大学、美国佐治亚大学等30多个单位的150多人参加了此次学术报告会。

新数据环境下的城市规划与研究

北京城市实验室2015年会

北京交通大学、北京城市实验室：主办
2015年6月6日下午1:00-6:30：时间
(主会场)北京交通大学机械楼二层多功能厅：地点
(直播厅)一层大会议室 中文：语言

媒体支持：国匠城、果说、市政厅、一览众山小、城市数据派

Session 1 1:10-3:25 pm

李栋

Table 1 Exposed days in each month for each sub-district

- 223 million people exposed more than six months in a year

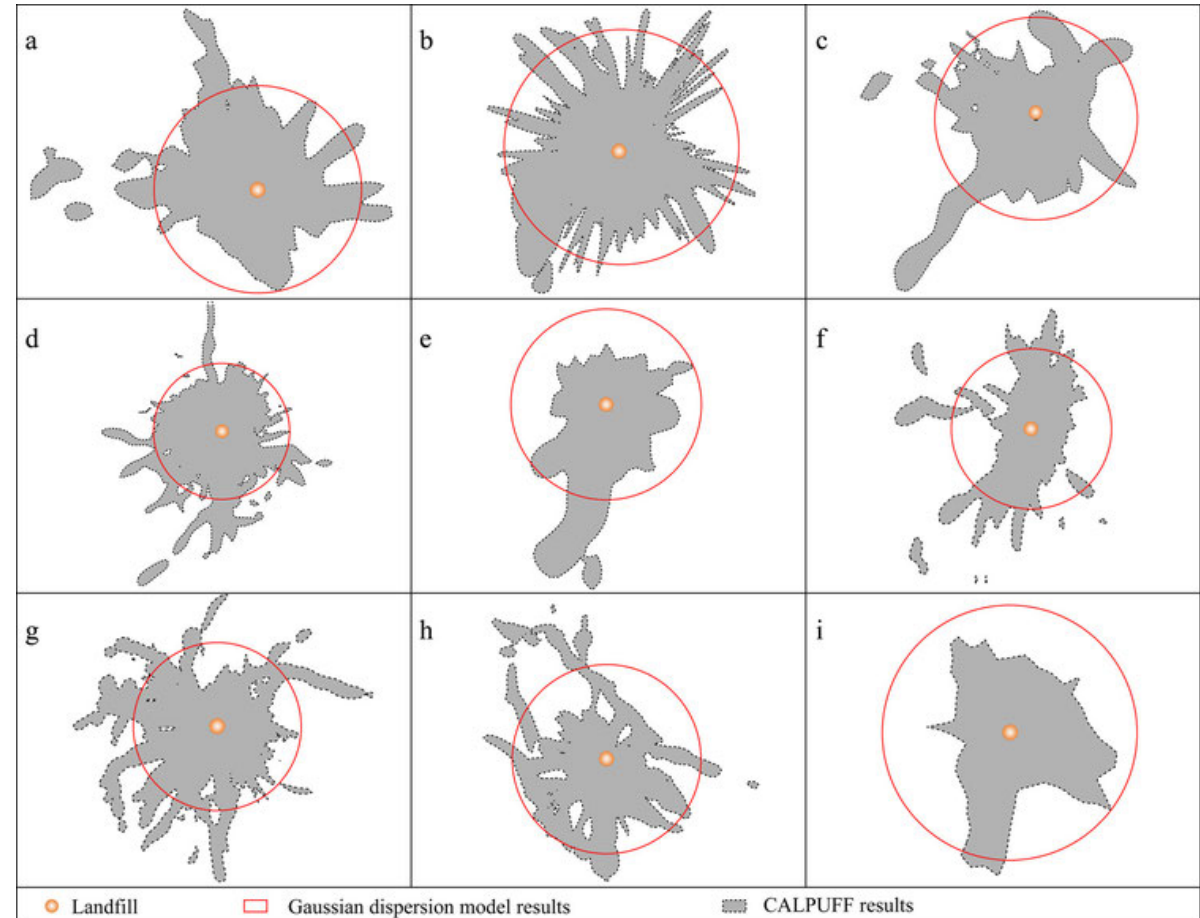

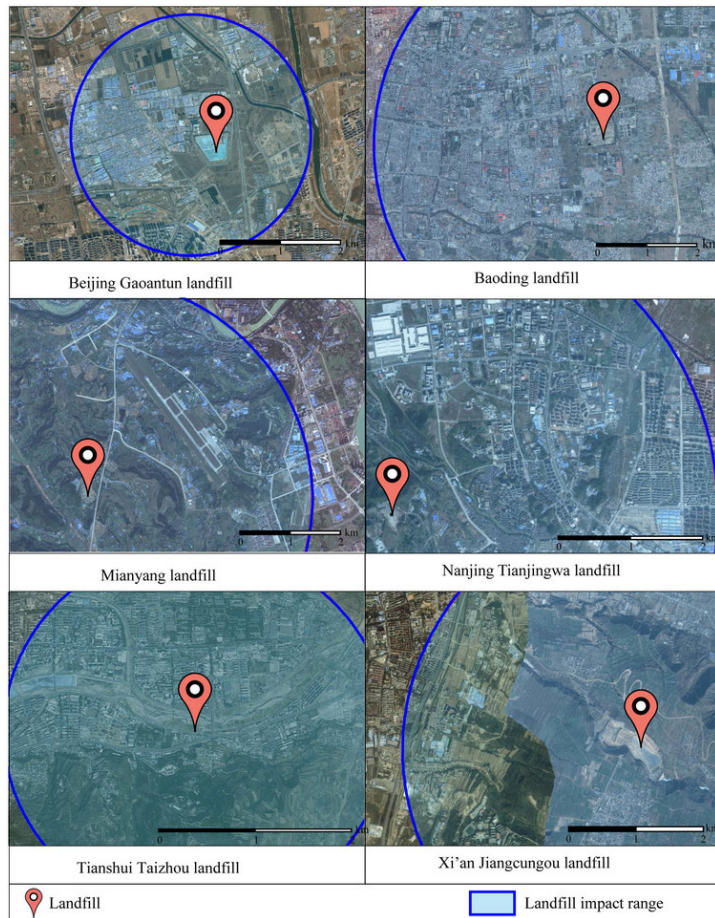

20 NIMBY

- Evaluating the impact of odors from the 1,955 landfills in China using a bottom-up approach
- We proposed a methodology to estimate the odors impact on landfills' surrounding residents using landfill information and population data. Our bottom-up method can ensure the accuracy of calculation as well as the full coverage of China. We collected and processed data from 1,955 landfills in China, including both sanitary landfill and open dump.

20 NIMBY

- The total impacted population has reached to 12.28 million, accounting for 0.90% of total population in China.
- 7818 sensitive facilities affected (schools and hospitals)

基于互联网大数据技术的重污染水体识别研究

2015-11-11 石峰、龙瀛 北京城市实验室BCL

国务院近期颁布的《水污染防治行动计划》对重污染水体和黑臭水体治理提出了明确的要求。然而在实际工作中，由于对重污染水体和黑臭水体的判别缺乏明确标准和识别手段，调查制定重污染水体清单成为“水十条”实施过程中的第一项重要任务。目前各地普遍采用以监测数据为基础进行统计的识别判断办法，而水质监测系统存在着监测能力不足、点位覆盖不够、监测指标与老百姓切身感受不一致等诸多实际问题，在当前的环保工作模式下，准确高效识别“污染最严重、群众反映最强烈、媒体最关心”的重污染水体具有很大工作难度。
